

Introducing efficient combustion system, solve energy saving issues!

Package mixer (mixture set for combustion) series

Package mixer is

Package mixer is a compact set the mixing and combustion air supply by the fan at low cost.

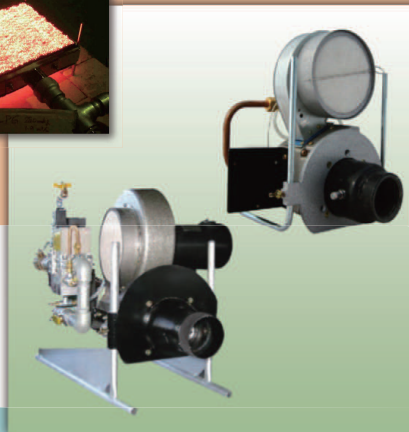

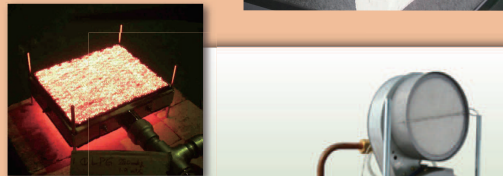

In order to burn the gas surface heater more effectively, optimum air supply and sufficient mixing are essential.

In addition, it can be set with just one touch to the required firepower, and various correspondence from the ON-OFF combustion to high-level electronic proportional control. Using a combination of a gas surface heater and a package mixer can greatly save fuel. In addition to the optimum fans for combustion, automatic ignition and fan operation confirmation Other combustion safety equipment is equipped compactly.

It is a mixing unit with a safety device that controls various burner tops including metal knit burners with optimum combustion.
